

I Claim:

[c1] A gun sling comprising:

a first strap, said first strap including a first side of an attachment means;

a second strap, said second strap including a second side of said attachment means positioned to selectively engage said first side of said attachment means; and

means for said first and second straps to engage an upper gun swivel and a lower gun swivel,

wherein said first and second straps each have a length adjustment means at a lower end.

[c2] The gun sling of claim 1, further comprising a padded portion near an upper end of said first and second straps.

[c3] The gun sling of claim 2, wherein said attachment means is located on said padded portions.

[c4] The gun sling of claim 1, wherein said attachment means is at least one means selected from the group consisting of snaps, hook-and-loop fasteners, magnetic fasteners, button-and-hole fasteners, zippers, locking plastic strips, and clasp-type fasteners.

[c5] The gun sling of claim 1, wherein said means for said first and second straps to engage an upper gun swivel is selected from the group consisting of a single clip for engaging said first and second straps, a single clip for engaging a single strap, a single triangular

loop at said upper swivel and clips for engaging said first and second straps, and a single plate with first and second slots at said upper swivel and clips for engaging said first and second straps.

[c6] The gun sling of claim 1, wherein said means for said first and second straps to engage a lower gun swivel is selected from the group consisting of a single triangular loop at said lower swivel and clips for engaging said first and second straps, a single plate with first and second slots at said lower swivel and clips for engaging said first and second straps, and a Y-strap comprised of a single clip for engaging a single strap at an end engaging said lower swivel and two straps having end clips at an end engaging said first and second straps.

[c7] The gun sling of claim 1, wherein said means for said first and second straps to engage a lower gun swivel includes a clip for each of said first and second straps to provide said length adjustment means.

[c8] A dual-position gun sling, comprising:

a first gun sling with a padded portion at an upper end;

a second gun sling with a padded portion at an upper end;

means for said first and second gun slings to engage an upper gun swivel;

a Y-strap for said first and second gun slings to engage a lower gun swivel,  
said Y-strap comprising:

a first clip for engaging a single strap at a first end to engage said lower

gun swivel;

a second strap attached at a first end to a central portion of said first strap; and

said first and second straps having end clips at respective second ends to engage said first and second gun slings,

wherein said end clips provide a length adjustment means for said first and second gun slings.

[c9] The dual-position gun sling of claim 8, further comprising:

a first side of an attachment means located on said padded portion of said first gun sling; and

a second side of an attachment means located on said padded portion of said second gun sling.

[c10] The dual-position gun sling of claim 9, wherein said attachment means is at least one means selected from the group consisting of snaps, hook-and-loop fasteners, magnetic fasteners, button-and-hole fasteners, zippers, locking plastic strips, and clasp-type fasteners.

[c11] The dual-position gun sling of claim 8, wherein said means for said first and second gun slings to engage an upper gun swivel is selected from the group consisting of a single clip for engaging said first and second gun slings, a single triangular loop at said upper swivel and clips for engaging said first and second gun slings, and a single

plate with first and second slots at said upper swivel and clips for engaging said first and second gun slings.

[c12] A Y-strap for allowing the use of two gun slings on a single gun, said Y-strap comprising:

a first clip for engaging a single strap at a first end to engage a lower swivel on said gun;

a second strap attached at a first end to a central portion of said first strap; and

said first and second straps having end clips at respective second ends to engage said two gun slings.
